

Step 1: Create Tables

CUSTOMERS table

```
CREATE TABLE customers (  
    customer_id NUMBER PRIMARY KEY,  
    name    VARCHAR2(100),  
    age     NUMBER,  
    balance NUMBER(12,2),  
    isvip   CHAR(1) DEFAULT 'N'  
);
```

LOANS table

```
CREATE TABLE loans (  
    loan_id    NUMBER PRIMARY KEY,  
    customer_id NUMBER,  
    interest_rate NUMBER(5,2),  
    due_date   DATE,  
    CONSTRAINT fk_customer  
        FOREIGN KEY (customer_id)  
        REFERENCES customers(customer_id)  
);
```

Step 2: Insert Sample Data (for testing)

Customers

```
INSERT INTO customers VALUES (1, 'Arun', 65, 15000, 'N');  
INSERT INTO customers VALUES (2, 'Divya', 45, 8000, 'N');  
INSERT INTO customers VALUES (3, 'Kiran', 70, 25000, 'N');  
INSERT INTO customers VALUES (4, 'Meena', 30, 12000, 'N');
```

Loans

```
INSERT INTO loans VALUES (101, 1, 10.50, SYSDATE + 10);
```

INSERT INTO loans VALUES (102, 2, 12.00, SYSDATE + 40);

INSERT INTO loans VALUES (103, 3, 11.25, SYSDATE + 20);

INSERT INTO loans VALUES (104, 4, 9.75, SYSDATE + 5);

Scenario 1: Discount for customers above 60

Requirement

If age > 60, reduce loan interest rate by 1% (multiply by 0.99)

Output:

	LOAN_ID	CUSTOMER_ID	INTEREST_RATE	DUE_DATE
1	101	1	10.3	7/3/2026, 5:32:44 A
2	102	2	12	8/2/2026, 5:32:44 A
3	103	3	11.03	7/13/2026, 5:32:44
4	104	4	9.75	6/28/2026, 5:32:44

Scenario 2: VIP customers based on balance

Requirement

If balance > 10000, set isvip = 'Y'

Output:

	CUSTOMER_ID	NAME	AGE	BALANCE	ISVIP
1	1	Arun	65	15000	Y
2	2	Divya	45	8000	N
3	3	Kiran	70	25000	Y
4	4	Meena	30	12000	Y

Scenario 3: Loan due reminders

Requirement

Print message for loans due in next **30 days**

Output:

```
Query result  Script output  DBMS output  Explain Plan  SQL history

SQL> BEGIN
  FOR rec IN (
    SELECT l.loan_id,
           c.name, ...
  ) LOOP
    ...
  END LOOP;
/

Reminder: Arun - Loan ID 101 due on 03-JUL-2026
Reminder: Kiran - Loan ID 103 due on 13-JUL-2026
Reminder: Meena - Loan ID 104 due on 28-JUN-2026
